| TCO   | 80.19   | <0.001   |
| FCW   | 44.4    | <0.001   |
| FCS   | 43.9    | <0.001   |
| FCO   | 21.84   | <0.001   |

Table SM6: Temporal and spatial variations among toxic metals in oyster tissue and sediment analyzed through one-way ANOVA at different study locations and their significance ( $p < 0.05$ ).

|     | F values | <i>p</i> |
|-----|----------|----------|
| CdS | 377.17   | <0.001   |
| CdO | 88.78    | <0.001   |
| PbS | 392.18   | <0.001   |
| PbO | 329.79   | <0.001   |
| HgS | 15.18    | <0.001   |
| HgO | 30.83    | <0.001   |

Table SM7: Variation in antioxidant enzymes (SOD, CAT, GST and MT) level across the study **locations** and their significance ( $p < 0.05$ ), analyzed by one-way ANOVA.

|     | F values | <i>p</i> |
|-----|----------|----------|
| CAT | 150.82   | <0.001   |
| SOD | 23.07    | <0.001   |
| GST | 222.52   | <0.001   |
| MT  | 369.42   | <0.001   |

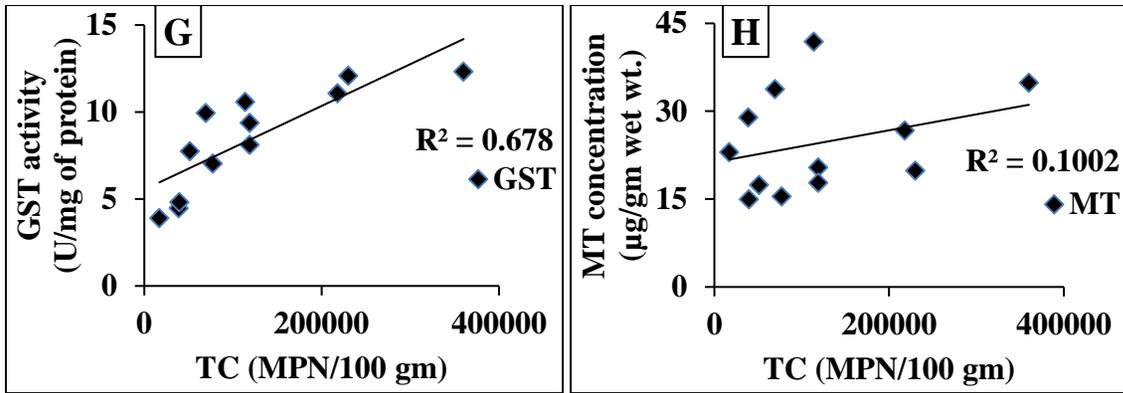

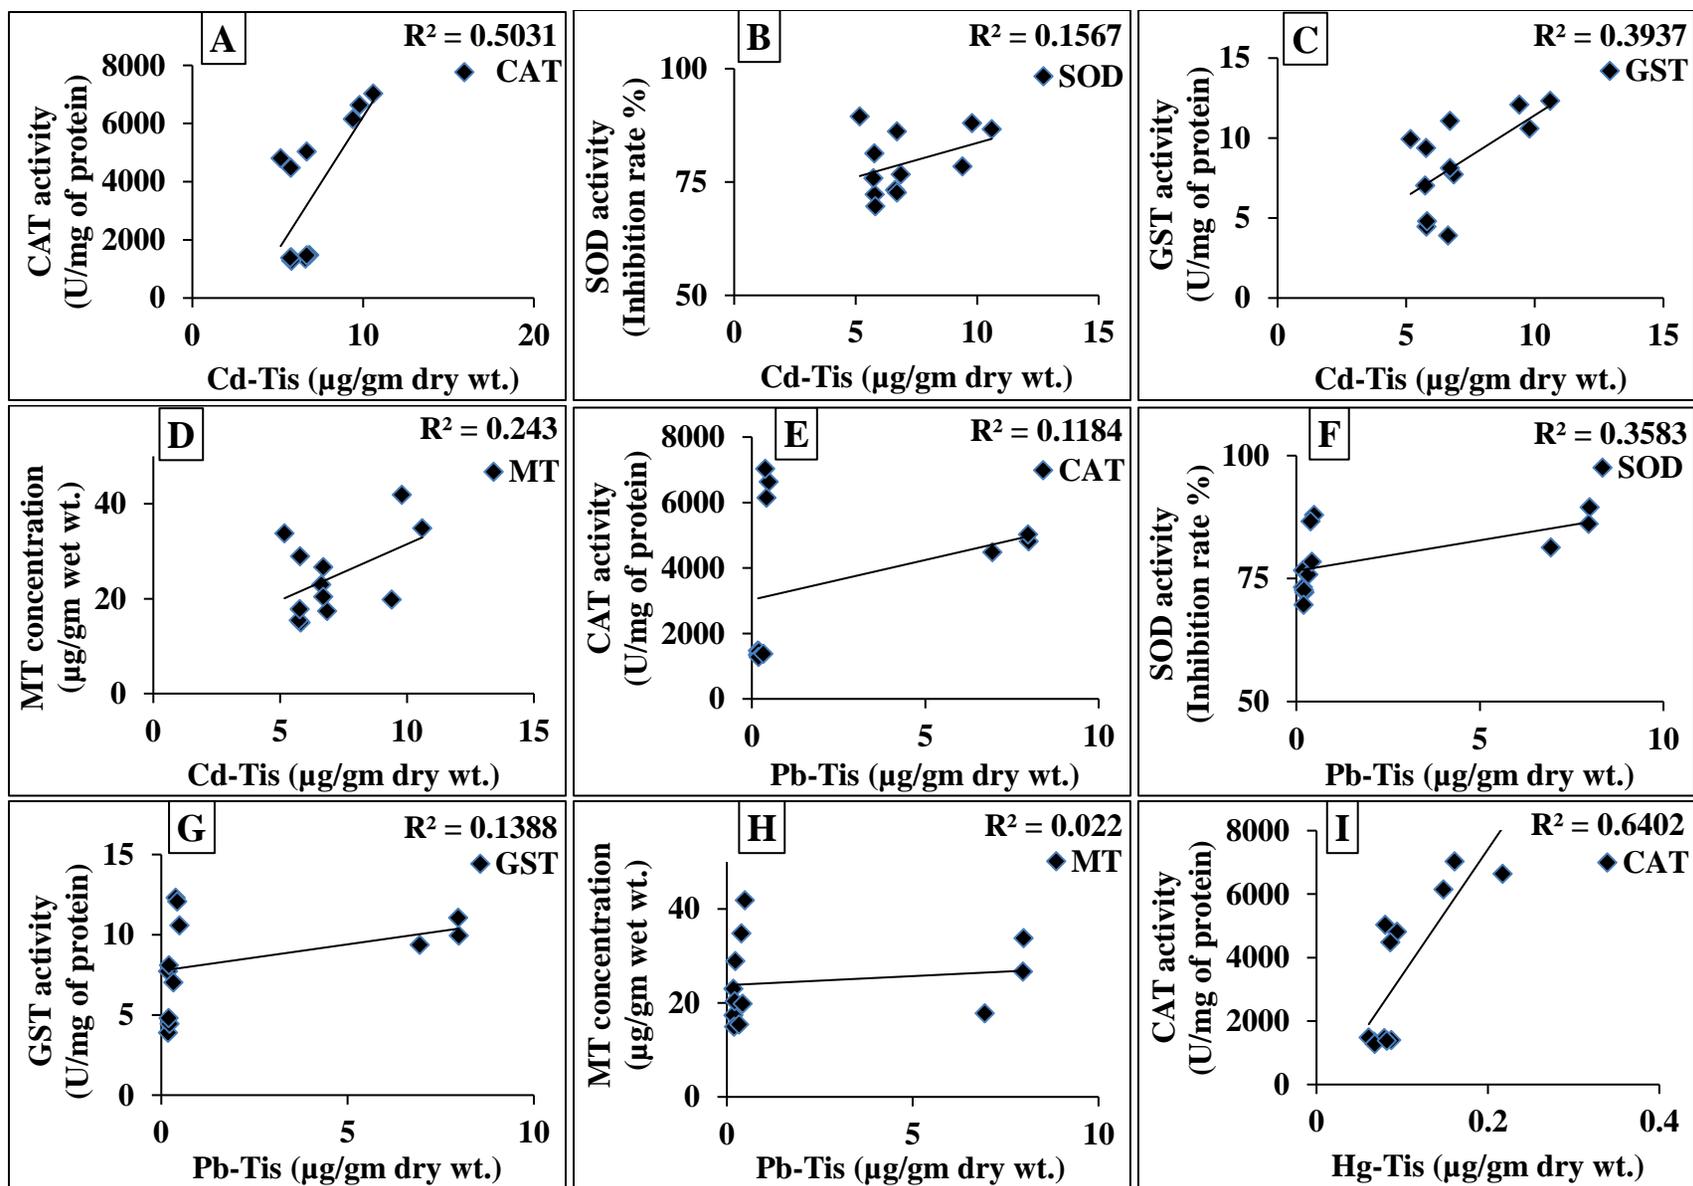

Fig. SM1- Regression of antioxidant enzymes levels (CAT, SOD, GST, and MT) on fecal (A, B, C, and D) and total coliforms (E, F, G, and H) linearly increased, suggesting stress in oyster.

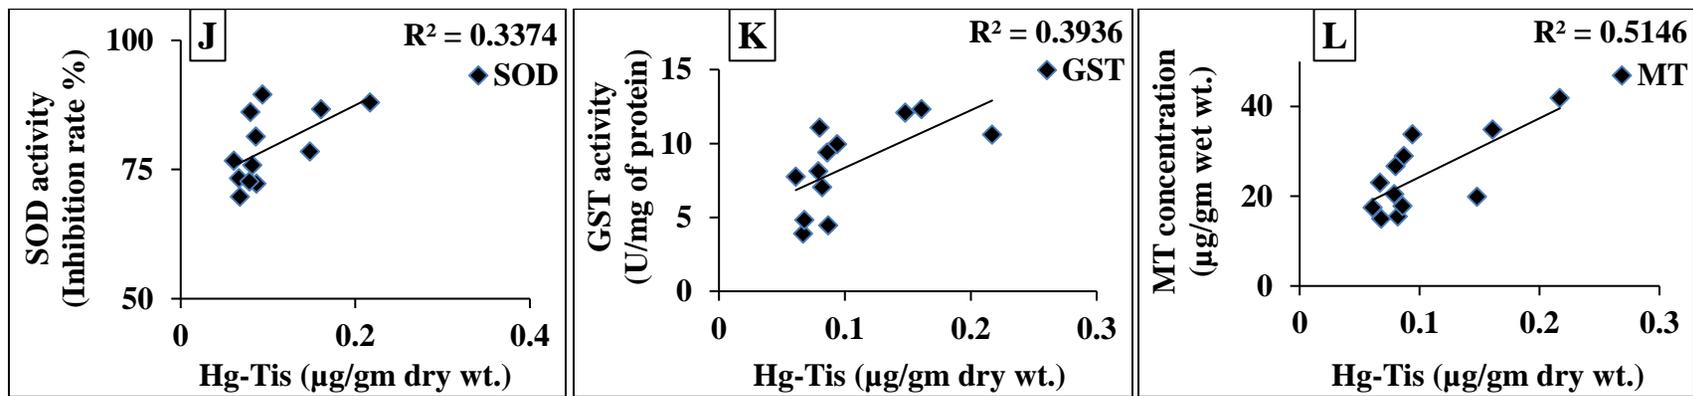

Fig. SM2- Regression of antioxidant enzymes levels (CAT, SOD, GST, and MT) on concentration of Cd (A, B, C, and D), Pb (E, F, G and H), and Hg (I, J, K and L) in the oyster tissue linearly increased, suggesting oxidative stress in the oysters.
